

Answer Key

Across

- 2 the branch of science that plants and maintains forests
- 5 constructive materials made from gluing thin layers of wood together
- 7 a tree that is no longer living yet is still standing
- 8 plants that keep their foliage year round and do not shed until new growth has come in
- 10 a cut length of a tree trunk
- 12 the upper level of vegetation consisting of the crowns of trees
- 13 a log that has been processed for lumber by removing the bark and squared off
- 14 trees which shed their leaves yearly, preparing for new growth
- 16 removing all trees in a forest area
- 18 cutting a felled tree into specific sized longs
- 19 wood from deciduous or broad leaf trees
- 20 wood from trees that are split into boards or planks

Down

- 1 a tree that produces its seeds in cone like appendages
- 3 a tree that is at least the height of four and a half feet tall and is four inches in diameter at the trunk
- 4 thin layer of wood
- 6 the center wood of a tree that is usually very dense and hard
- 7 management of forests
- 9 annual growth of wood in trees and other plants
- 11 the process of which the wood of a cut tree shrinks because the water supply is lost
- 14 a tree which is dead before being harvested
- 15 any wood that is relatively soft and easy to cut
- 17 wood of living trees
- 18 process of marking trees that are to be cut down in a specific boundary line by paint or cutting the bark
